

The future of e-mobility

Spelsberg drives forward the expansion of the charging infrastructure

Schalksmühle, 30.04.2026. As a supporter of e-mobility, Spelsberg aims to continue facilitating both the uptake and the widespread expansion of private charging infrastructure. The current, changed funding landscape also makes economically efficient and future-proof solutions more accessible, creating new opportunities for the expansion of charging points. With the Spelsberg Wallbox Smart Pro, a funding-eligible solution for smart charging is available.

Spelsberg is sending a clear signal for the future of e-mobility and thus accelerating the expansion of modern charging infrastructure in Germany in the long term. The focus is on consistently further developing the Spelsberg Wallbox portfolio and offering a new, more attractive price-performance ratio while keeping the scope of features unchanged and maintaining the manufacturer's proven quality from Schalksmühle.

Promotion and future-proof charging infrastructure

A particular focus is on the new funding for charging infrastructure in and around existing multi-party buildings, which significantly facilitates and accelerates the expansion of private charging points in the residential environment. The acquisition and installation of non-publicly accessible charging points with technical equipment, grid connection, required installations and necessary construction measures are eligible for funding. The Spelsberg Wallbox Smart Pro is specifically designed for these requirements and meets the conditions for funding-eligible applications in the area of networked charging infrastructure. Funding applications have been possible since 15 April 2026. Homeowners'

associations, private owners of multi-party buildings, owners of parking spaces, small and medium-sized enterprises and companies with large residential portfolios are eligible to apply. This creates a clear incentive for installers, project developers and the housing industry to plan and implement charging infrastructure projects at an early stage.

Smart technology for complex projects

The Spelsberg Wallbox Smart Pro was developed particularly for demanding use cases such as owner-occupied homes and tenant projects. Thanks to its interfaces with common energy management systems, it can be flexibly integrated into existing and new energy concepts. "For specialist electrical companies, it is crucial that charging infrastructure is technically reliable and can also be integrated quickly and economically into different buildings. Solutions such as the Spelsberg Wallbox Smart Pro significantly simplify planning and installation while at the same time creating future security for our customers," explains electrical installer Marco Sahl of Elektro Freydank. Another highlight is the newly developed Spelsberg Wallbox Management Tool, which enables installers to digitally commission multiple Wallboxes simultaneously and to centrally manage all Wallboxes in the network. In addition, Spelsberg facilitates project planning through attractive bundle offers tailored to different application areas.

Design, quality and system integration in focus

The Spelsberg Wallbox continues to stand for well-thought-out, attractive design, high reliability and easy integration in various applications. The scope of features remains unchanged at a high level, while the overall offering is even more strongly structured for cost-effectiveness and practical applicability.

About Spelsberg

Spelsberg is one of the internationally leading manufacturers in the electrical industry and is primarily active in the field of electrical installation and enclosure technology. The family-owned company with around 600 employees develops, produces and sells products and systems for the electrical trade and industry and is regarded as a competent problem solver for all enclosure-related tasks. Spelsberg has stood for safety, high quality and technical performance for over 120 years and has its own VDE- and UL-certified test laboratories. The range includes over 5,000 widely available articles, including junction boxes, Small distribution boards, terminal blocks, meter enclosures and industrial enclosures. Furthermore, the family-owned company develops, manufactures and markets enclosure as well as ready-to-wire systems tailored to customer-specific requirements. The enclosure specialist combines tradition and modernity: with the expansion into the e-mobility business sector, Spelsberg is positioning itself more broadly in the field of sustainable and forward-looking technologies.
